Testing for linearSearch of the IntSortSearch class

Num Comps = 1
In searching for 44 in the Array containing one element only, and the value being searched for is the element in the array, aka [44], 44 was found at position 0.
Num Comps = 1
In searching for -28 in the Array containing one element only, and the value being searched for is NOT the element in the array, aka [80], -28 was not found.
Num Comps = 1
In searching for -38 in the Array containing two unequal elements, and the value being searched for is one of the elements of the array, aka [-38, -60], -38 was found at position 0.
Num Comps = 1
In searching for -52 in the Array containing two unequal elements, and the value being searched for is NOT ANY of the elements of the array, aka [82, 73], -52 was not found.
Num Comps = 2
In searching for -47 in the Array containing 3 elements, and the value being searched for is the very first element of the array, aka [-47, 80, -33], -47 was found at position 0.
Num Comps = 2
In searching for 59 in the Array containing 3 elements, and the value being searched for is the very last element of the array, aka [-6, 26, 59], 59 was found at position 2.
Num Comps = 1
In searching for -26 in the Array containing 3 elements, and the value being searched for is the middle element, aka [18, -26, -56], -26 was found at position 1.
Num Comps = 2
In searching for 7 in the Array containing 3 elements, and the value being searched for is NOT ANY of the elements in the array, aka [-15, -59, -5], 7 was not found.

**********

Num Comps = 1
In searching for -19 in the Array containing one element only, and the value being searched for is the element in the array, aka [-19], -19 was found at position 0.
Num Comps = 1
In searching for -25 in the Array containing one element only, and the value being searched for is NOT the element in the array, aka [-20], -25 was not found.
Num Comps = 1
In searching for 64 in the Array containing two unequal elements, and the value being searched for is one of the elements of the array, aka [64, -8], 64 was found at position 0.
Num Comps = 2

In searching for 5 in the Array containing two unequal elements, and the value being searched for is NOT ANY of the elements of the array, aka [-3, 49], 5 was not found.
Num Comps = 2
In searching for -27 in the Array containing 3 elements, and the value being searched for is the very first element of the array, aka [-27, 44, 32], -27 was found at position 0.
Num Comps = 2
In searching for 26 in the Array containing 3 elements, and the value being searched for is the very last element of the array, aka [-70, -51, 26], 26 was found at position 2.
Num Comps = 1
In searching for -75 in the Array containing 3 elements, and the value being searched for is the middle element, aka [41, -75, -17], -75 was found at position 1.
Num Comps = 2
In searching for 73 in the Array containing 3 elements, and the value being searched for is NOT ANY of the elements in the array, aka [70, -26, -63], 73 was not found.

**********

Num Comps = 1
In searching for 33 in the Array containing one element only, and the value being searched for is the element in the array, aka [33], 33 was found at position 0.
Num Comps = 1
In searching for 60 in the Array containing one element only, and the value being searched for is NOT the element in the array, aka [4], 60 was not found.
Num Comps = 1
In searching for -24 in the Array containing two unequal elements, and the value being searched for is one of the elements of the array, aka [-24, -74], -24 was found at position 0.
Num Comps = 1
In searching for -47 in the Array containing two unequal elements, and the value being searched for is NOT ANY of the elements of the array, aka [94, -54], -47 was not found.
Num Comps = 2
In searching for 84 in the Array containing 3 elements, and the value being searched for is the very first element of the array, aka [84, -55, 51], 84 was not found.
Num Comps = 2
In searching for 72 in the Array containing 3 elements, and the value being searched for is the very last element of the array, aka [15, -81, 72], 72 was found at position 2.
Num Comps = 1
In searching for -2 in the Array containing 3 elements, and the value being searched for is the middle element, aka [86, -2, -8], -2 was found at position 1.
Num Comps = 2

In searching for 44 in the Array containing 3 elements, and the value being searched for is NOT ANY of the elements in the array, aka [-82, -11, 26], 44 was not found.

**********

Testing for selectionSort of the IntSortSearch class

Num Comps = 0
In sorting the Array containing one element only, aka [-67], the expected array is [-67]. The actual sorted array using the selectionSort method is [-67].
Num Comps = 2
In sorting the Array containing two unequal elements, aka [26, 3], the expected array is [3, 26]. The actual sorted array using the selectionSort method is [3, 26].

Num Comps = 5
In sorting the Array containing 3 elements, already sorted, aka [-73, -50, -11], the expected array is [-73, -50, -11]. The actual sorted array using the selectionSort method is [-73, -50, -11].
Num Comps = 5
In sorting the Array containing 3 elements, already sorted in the reverse order, aka [-7, -81, -87], the expected array is [-87, -81, -7]. The actual sorted array using the selectionSort method is [-87, -81, -7].
Num Comps = 5
In sorting the Array containing 3 elements, all of them negative, aka [-40, -52, -12], the expected array is [-52, -40, -12]. The actual sorted array using the selectionSort method is [-52, -40, -12].
Num Comps = 5
In sorting the Array containing 3 elements, one negative, one zero, one positive, aka [-67, 0, 10], the expected array is [-67, 0, 10]. The actual sorted array using the selectionSort method is [-67, 0, 10].
Num Comps = 5
In sorting the Array containing 3 elements, all of them the same value (like: 5,5,5), aka [99, 99, 99], the expected array is [99, 99, 99]. The actual sorted array using the selectionSort method is [99, 99, 99].

**********

Num Comps = 0
In sorting the Array containing one element only, aka [65], the expected array is [65]. The actual sorted array using the selectionSort method is [65].
Num Comps = 2
In sorting the Array containing two unequal elements, aka [88, -98], the expected array is [-98, 88]. The actual sorted array using the selectionSort method is [-98, 88].
Num Comps = 5
In sorting the Array containing 3 elements, already sorted, aka [-62, -31, 53], the expected array is [-62, -31, 53]. The actual sorted array using the selectionSort method is [-62, -31, 53].
Num Comps = 5
In sorting the Array containing 3 elements, already sorted in the reverse order, aka [98, 81, -100], the expected array is [-100, 81, 98]. The actual sorted array using the selectionSort method is [-100, 81, 98].
Num Comps = 5
In sorting the Array containing 3 elements, all of them negative, aka [-35, -8, -44], the expected array is [-44, -35, -8]. The actual sorted array using the selectionSort method is [-44, -35, -8].
Num Comps = 5

In sorting the Array containing 3 elements, one negative, one zero, one positive, aka [-54, 0, 7], the expected array is [-54, 0, 7]. The actual sorted array using the selectionSort method is [-54, 0, 7].
Num Comps = 5
In sorting the Array containing 3 elements, all of them the same value (like: 5,5,5), aka [6, 6, 6], the expected array is [6, 6, 6]. The actual sorted array using the selectionSort method is [6, 6, 6].

**********

Num Comps = 0
In sorting the Array containing one element only, aka [25], the expected array is [25]. The actual sorted array using the selectionSort method is [25].
Num Comps = 2
In sorting the Array containing two unequal elements, aka [49, 17], the expected array is [17, 49]. The actual sorted array using the selectionSort method is [17, 49].
Num Comps = 5
In sorting the Array containing 3 elements, already sorted, aka [-75, -17, 61], the expected array is [-75, -17, 61]. The actual sorted array using the selectionSort method is [-75, -17, 61].
Num Comps = 5
In sorting the Array containing 3 elements, already sorted in the reverse order, aka [7, -71, -91], the expected array is [-91, -71, 7]. The actual sorted array using the selectionSort method is [-91, -71, 7].
Num Comps = 5
In sorting the Array containing 3 elements, all of them negative, aka [-40, -34, -52], the expected array is [-52, -40, -34]. The actual sorted array using the selectionSort method is [-52, -40, -34].
Num Comps = 5
In sorting the Array containing 3 elements, one negative, one zero, one positive, aka [-79, 0, 75], the expected array is [-79, 0, 75]. The actual sorted array using the selectionSort method is [-79, 0, 75].
Num Comps = 5
In sorting the Array containing 3 elements, all of them the same value (like: 5,5,5), aka [21, 21, 21], the expected array is [21, 21, 21]. The actual sorted array using the selectionSort method is [21, 21, 21].
